The very easy and customer friendly small print

- There are many items that go into a boat that are simply not listed but all our boats are quoted as a fully finished high quality fitted out boat so if an item is needed to fully finish the boat then it is deemed to be included.
- At least 3 products will be offered within the allowances ensuring they match the clients design and colour options.
- The client gets to change the layout and design as much as they want.
- Client can select their own products within the set allowances without any extras being applied.
- The client has the option of upgrading any item and only has to pay the extra over cost. (i.e. if you selected a tile that was 4 pounds per m2 over the cost of what was allowed then the client only pays the extra over per m2 used for that product).
- An extra hour of labour time is allowed for if a customer choice their own materials and there a little harder to install or use.
- We use a kitty-based system to ensure boats stay within budget. If a product falls below the budget, then this goes into the kitty to allow any items that fall over budget to not increase the costs.
- The client can request normal extras like cratch covers / pram covers and pay the retail cost price.
- The client must select the correct spec that matches their needs to ensure the price is correct as there are items allowed for in each spec that are hidden works. i.e. Tiles in the comfort spec allow for hardy backer board, wall/floor tile adhesive, grout, tile trims and extra labour element etc. If you upgrade from vinyl flooring to tiles then all these costs need to be considered where if you select the correct spec all these prices are allowed for.
- Our 'build your own boat' download has all allowances built in and is what we use to price all customers boats.
